

**EDUCATIONAL PROGRAM
6B01508 TEACHER TRAINING OF
MATHEMATICS-PHYSICS**

Code and Classification of the field of education: 6B01 Pedagogical Sciences

Code and classification of training course: 6B015 Teacher training of in natural sciencs subjects

Awarded degree: Bachelor of Education in the educational program
6B01508 Teacher training of Mathematics-Physics

Type of program: Bachelor, the 6th level NQF/SQF / ISCE

Total amount of credits: 240 Academic credits / 240 ECTS

The educational program was reviewed at the Council of the Physics and Mathematics Faculty and recommended for approval by the Academic Council of the University.

Protocol No 09 «26.04 » 2023

The educational program was reviewed by the Academic Council of the University and recommended for approval by the Board

Protocol No 11 «26.04 » 2023

The educational program was approved by the decision of the Board and put into effect.

Protocol No 12 «22.05 » 2023

Abbreviations:

- NQF - National Qualifications Framework*
IQF - Industry Qualifications Framework
ISCE - International Standard Classification of Education
EP - Educational Program
WC - Working curriculum
PED - Product elective disciplines
KC - Key competencies
LO - Learning Outcomes
ICT - Information and communication technologies
LC - Landmark control
CC - Current control
FG - The final grade
GED - General educational disciplines
BD - Basic disciplines
SD - Specialized disciplines

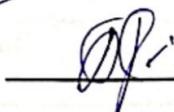

Agreed:

Member of the Board -Vice-Rector for
Academic Affairs

Kudysheva A.A.

Director of the Department of Academic
Affairs

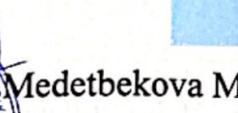

Berdaliev D.T.

Dean of the Faculty of Physics and
Mathematics

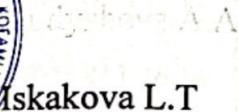

Ibashova A.B.

Director of the Methodological Center of the
Department of Education of the city of
Shymkent if the Board -Vice-Rector for
Academic Affairs

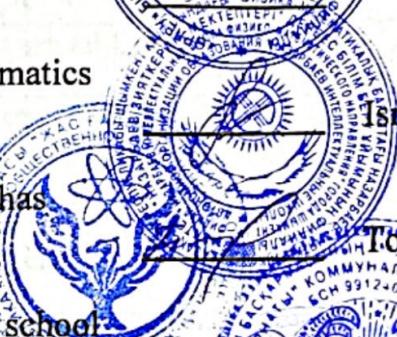

Medetbekova M.A.

Director of AOO "Orleu" of Shymkent and
Turkestan region

Iskakova L.T.

Director of NIS of Physics and Mathematics
in Shymkent

INTRODUCTION

This educational program (hereinafter - EP) is a normative document of a conceptual nature, based on the goals and values of university education, containing general information about the professional activities of graduates, aims and objectives of EP of competence graduate model, the expected learning outcomes and policies of their evaluation of methods and methods of organization of educational process on the content of the program.

The main directions of EP:

- implementation of the educational policy of the University;
- implementation of trilingual education through the organization of educational process in the Kazakh, Russian and English languages;
- improving the quality of the learning process on the basis of competence approach;
- the willingness of students to educate themselves throughout their lives;
- formation of the outlook of students, develop their creativity, communication, critical thinking, research and information capabilities.

EP is the basis for the development of the following documents:

- Catalog elective subjects (CES);
- Academic calendar of the educational process;
- Individual educational plan (IEP);
- Working curriculum (WC);
- Working curriculum subjects (SYLLABUS);
- Teaching materials disciplines (TMD);
- expected results in the disciplines of learning;
- criteria for assessing the results of training in the disciplines;
- organizing all kinds of professional practice, as well as other documents necessary for the educational process.

1 PASSPORT OF THE EDUCATIONAL PROGRAM

1.1 Scope of professional activity of graduates

Bachelor of Education OP 6B01508- « Teacher training of mathematics-physics» carries out his professional activities in the field of education.

1.2 The objects of professional activity of graduates:

- basic and specialized schools;
- specialized schools;
- the organization of technical and vocational post-secondary education.

1.3 Types of professional activity of graduates:

- training;
- educative;
- methodical;
- research;
- social and communicative.

1.4 Objectives of professional activity of graduates

Training:

- training and development of students;
- the organization of educational process in professional activities;
- design and management of the pedagogical process;
- diagnosis, correction and prediction of the results of educational activities.

Educative:

- the involvement of students in the system of social values;
- implementation of educational work in accordance with the laws, the laws, the principles of the educational process, educational mechanisms;
- planning extracurricular educational work;
- addressing specific educational objectives;
- the use of various forms and methods of training and education of students in extracurricular activities;
- liaising with groups of students, subject teachers and parents.

Methodical:

- implementation of methodological support of the educational process;
- planning the content of education at different levels;
- identification of methods for the organization and implementation of the educational process;
- the use of new educational technologies in the learning process.

Research:

- the study of the level of assimilation of the content of education, the study of the educational environment;
- the development of scientific and methodical literature;
- analysis and generalization of the advanced pedagogical experience in the field of education;
- conducting of pedagogical experiment, the introduction of its results in the educational process.

Social and communicative:

- the implementation of cooperation with the professional community and all interested education stakeholders;
- the formation of a multicultural identity;
- creation of favorable conditions for education and development of students and provide them with educational support.

2 FEATURES OF THE EDUCATIONAL PROGRAM

Subdivision of higher education 6B01508- « Teacher training of mathematics-physics» was developed in accordance with the European Qualifications Framework, National Qualifications Framework, the Dublin descriptors, Industry frame of qualifications, professional teacher standards to meet the requirements of the regional labor market and employers.

OP determines goals, expected results, conditions and techniques of the educational process, the realization of quality assessment preparation graduate in this area, the contents of the working curriculum.

Features of OP: Presentation of the graduate's competence model taking into account the competence approach based on the modern educational paradigm. The competence model corresponds to three main goals defined in accordance with the strategic development plan and the mission of the University. As a result of the development of the educational program aimed at the formation of General cultural, professional and special competencies of the graduate, the expected results of training are determined. In the content of the OP, on the basis of the updated educational program, the share of methodical disciplines is increased.

3 PURPOSE AND VALUES EDUCATION PROGRAM

3.1 The purpose and objectives of the educational program

The main objective of OP is defined in accordance with the objectives of the Strategic Plan and the development of the University's mission.

Purpose of the Educational Program: Preparation of the teacher of mathematics and physics in accordance with the requirements of the labor market and the National qualification system.

Tasks of the educational program:

- formation of core competencies needed for effective implementation of the professional activities of students;
- the formation of social responsibility training based on interpersonal values and professional ethics;
- bringing the level of quality of education in line with the requirements of national and international standards on the basis of motivation of training to professional development, self-realization;
- the formation of students' professional knowledge and practical skills based on the updated content of education;
- providing training of highly educated professionals who are actively involved in the modernization of society on the basis of language trinity, functional literacy, healthy lifestyle.

3.2 Values of the Educational Program

The core values defined in the contents of EP:

- Kazakhstan patriotism and civic responsibility;
- Honesty;
- respect;
- cooperation;
- openness.

4 GRADUATE MODEL

1. **Subject knowledge:** wide and deep understanding of their subject area, applies the knowledge in their professional activities.
2. **Organizational and methodological skills:** uses innovative technologies in planning, organization and management of professional activities, shows critical thinking and creativity in solving complex problems.
3. **Research skills:** conducts scientific and methodological work, attracts students to research work.

4. **Leadership and entrepreneurial skills:** able to work in a team, is active in the renewal of society
5. **Cultural competence:** has the ability to be a cultural and tolerant citizen of his country.
6. **The ability to learn throughout life:** coordinating their talents and interests in accordance with the needs of society.
7. **Information skills:** understands the essence of the information society, uses ICT in professional activities.

5 EXPECTED RESULTS TRAINING ON EDUCATIONAL PROGRAMS

Learning outcomes of OP: Upon successful completion of this OP student must:

- ✓ **LO1** – demonstrate subject knowledge and understanding based on advanced knowledge in teaching subject;
- ✓ **LO2** – apply theoretical and practical knowledge to solve educational, practical and professional problems in the field of teaching subject;
- ✓ **LO3** – know and understand facts, theories, and dependencies between them in teaching subject;
- ✓ **LO4** – argue the role and place of the subject in real life and in the system of sciences and understand the significance of the principles and culture of academic honesty;
- ✓ **LO5** – apply pedagogical knowledge and understanding at the professional level, formulate arguments and solve problems of educational activity;
- ✓ **LO6** – apply innovative technologies, ICT, methods and techniques of criteria assessment and diagnostics in teaching subject;
- ✓ **LO7** – know the methods of scientific research and academic writing and apply them in teaching subject, in interpersonal communication and in teamwork;
- ✓ **LO8** – collect and interpret information for the formation of judgments, taking into account social, ethical and scientific considerations;
- ✓ **LO9** – demonstrate the learning skills necessary for independent continuation of further education in the field of teaching subject and in the formation of personal qualities of students;
- ✓ **LO10** – assess creativity in solving problems arising in the practice of technology and inclusive education, in conflict situations.

6 POLICY ASSESSMENT OF EDUCATIONAL ACHIEVEMENT

In order to verify the learning achievements of students, the university provides for the following types of knowledge assessment control (formation of expected learning outcomes):

- current control;
- midterm control;
- intermediate examination;
- final examination.

For all types of control of students' learning achievements (current control, midterm control, interim and final examination) the technology of criterion evaluation is used. Assessment is carried out according to the table on the letter-rating system.

Assessment of students' learning achievements on the traditional scale and point-rating letter system (ECTS)

Letter grade	Digital equivalent of points	Points (% content)	Traditional assessment system
A	4,0	95-100	excellent
A-	3,67	90-94	
B+	3,33	85-89	

B	3,0	80-84	
B-	2,67	75-79	
C+	2,33	70-74	
C	2,0	65-69	satisfactory
C-	1,67	60-64	
D+	1,33	55-59	
D-	1,0	50-54	
FX	0,5	25-49	unsatisfactory
F	0	0-24	

Current control - a systematic check of students' knowledge in accordance with the curriculum, conducted by the teacher in classroom and out-of-classroom classes during the academic period.

Midterm control – control of students' learning achievements at the end of a major section (module) of one academic discipline.

During one academic period there are two midterm controls.

The end-of-term control is posted in the electronic journal on a 100-point scale according to the academic calendar, on weeks 7 and 15.

Each discipline is taught during one academic period and ends with intermediate examination (control).

During the period of current control the teaching staff evaluates the students in practical, laboratory, seminar, studio, IWS (IWST/IWS, IWMT/IWM, IWDT/IWD), and other classes on a 100-point scale exhibiting in the electronic journal. The final score of the current control is calculated taking into account the weight share of points by types of classes. The weight share of points by types of classes is approved by the Academic Council of the University

Types of classes	Weight share
Lecture (L)	K ₁
Practical (Seminar) (P)	K ₂
Laboratory (Z)	K ₃
Studio (S)	K ₄
IWS (B)	K ₅

$$CC1(CC2) = K_1 \cdot L_{op} + K_2 \cdot P_{op} + K_3 \cdot Z_{op} + K_4 \cdot S_{op} + K_5 \cdot B_{op}$$

Average grades in L_{op} -lectures, in P_{op} -practical, no Z_{op} -laboratory classes, S_{op} – studio classes, in IWS – B_{op}

The final ranking score for weeks 7 and 15 is calculated as follows:

$$R1(P2) = 0,6 * CC1(CC2) + 0,4 * EC1(EC2)$$

R1 - the first rating, R2 - the second rating.

Calculation of the admission rating (AR) of the exam:

$$AR = \frac{R1 + R2}{2}$$

The exam admission rating must be $AR \geq 50$.

Current and midterm controls make up 60% of the student's final score, and the student gains the remaining 40% of the points in the exam.

The results of the intermediate examination are calculated using the formula given below:

$$\text{Final assessment (FA)} = 0,6 * \text{AR} + 0,4 * \text{E}$$

Appropriateness of learning outcomes and assessment methods

Learning outcomes	Assessment methods
LO 1,2,3, 5,6,7,8,10	Activity in classroom training
LO 2,3, 7, 10	Essay
LO 2,3,4, 8	Group presentations
LO 2, 3, 6,7, 8	Project preparation (group work)
LO 1, 3, 5	Individual assignment
LO 6, 7, 10	Flipped Classroom Technology
LO 1,4,7,10	Case study
LO 1, 2, 3, 4	Scientific research
LO 8,10	Gamification
LO 2,5	Portfolio
LO 5, 6,7,9, 10	Practice report
LO 1-10	Final intermediate control
LO 1-10	Final examination

Assessment methods of control of educational activities of students are based on the system of evaluating system of evaluation of functional achievements of students, namely, tests and other forms of self-study.

The methods and technologies of training:

- * pedagogical techniques considered as a central object of study;
- * open-inquiry-based approach to learning;
- * role playing games;
- * educational simulations;
- * Case study;
- * Project method;
- * Task method;
- * Group method;
- * Individual method;
- * Integrated learning makes it possible to conduct joint cross-curricular studies and make connections. An integrated curriculum uses a thematic approach to the teaching of various subjects in the school, which helps to develop and enhance the skills and knowledge of students and prepare them for real life.
- * Research-oriented learning is a learning strategy that involves students in the process of problem solving, critical thinking, and inquiry. It encourages students to ask questions, explore ideas, and find solutions through research and analysis.
- * Problem-based learning is a learning strategy that focuses on solving real-world problems. It encourages students to think critically, analyze information, and apply their knowledge to find solutions.
- * Project-based learning is a learning strategy that involves students in the process of solving complex problems by working on projects. It encourages students to think critically, analyze information, and apply their knowledge to find solutions.
- * Game-based learning is a learning strategy that uses games to teach concepts and skills. It can be used to teach a wide range of subjects, from math and science to history and literature. Games can help students learn in a fun and engaging way, while also providing opportunities for collaboration and competition.
- * Flipped classroom is a learning strategy that involves students watching video lectures or reading materials online before coming to class. In class, students engage in active learning activities, such as group discussions, problem-solving exercises, and hands-on experiments. This strategy can help students learn more effectively and efficiently, while also providing opportunities for collaboration and communication.
- * Blended learning is a learning strategy that combines traditional face-to-face instruction with online learning. It can be used to provide students with a variety of learning experiences, such as video lectures, interactive simulations, and online quizzes. This strategy can help students learn in a more personalized and flexible way, while also providing opportunities for collaboration and communication.

7 METHODS AND TECHNIQUES FOR THE IMPLEMENTATION OF THE ORGANIZATION OF EDUCATIONAL PROCESS

Organization of educational process is carried out on credit technology based on the choice of studying the discipline, order the development of disciplines and modules.

Tasks of the organization of educational process:

- unification of knowledge;
- creation of conditions for maximum individualization of instruction;
- strengthening the role and effectiveness of independent work of students;
- Identification of educational achievements of students on the basis of an efficient and transparent procedures for their control.

Training opportunities on credit technology:

- the introduction of academic credits system to assess the labor costs of students and teachers in each discipline;

- participate in the formation of the individual curriculum;
- the choice of subjects and modules in the catalog of elective courses;
- the freedom to choose teacher training;
- the choice of an educational path with the help of student advisors;
- the use of interactive teaching methods;
- academic freedom in the formation of educational programs;
- providing of training necessary teaching and learning materials;
- the use of effective methods of control of educational achievements of students;
- the use of score-rating system of evaluation of educational achievements of each discipline, and other forms of self-study.

The methods and technologies of training:

- reflexive techniques considered as a central object of study;
- competence-based approach to learning;
- role-playing games;
- educational discussions;
- Case Study;
- Gamification;
- design methods.

Types of methods and technologies of training to choose the teachers themselves.

Integrated learning makes it possible to conduct classes with a wide use of interdisciplinary connections. An integrated approach in teaching chemistry is necessary for the formation of a holistic worldview and worldview, the unification and mutual influence of students' educational and research practices.

Research practice is aimed at expanding and consolidating the theoretical and practical knowledge gained by students in the learning process, acquiring and improving practical skills.

Tasks for the development of research skills of students:

- ability to see problems
- ability to put forward hypotheses
- the ability to ask questions
- the ability to define concepts
- ability to classify

Adaptive technologies used for students with special educational needs (SEN).

For students with special educational needs (SEN), the following forms of organization of the educational process and knowledge control are provided:

for the visually impaired there is an opportunity:

- the use of training and handouts printed in large print;
- the use of reference notes for recording lectures;

Opportunities for the deaf and hard of hearing:

- to take a comfortable place in the audience;
- the use of visual reference diagrams in lectures to facilitate understanding of the material;

- preferential performance of educational tasks in writing;
- increasing the time for the analysis of educational material.

The main form of organization of the educational process in groups with SEN is integrated learning, i.e. all students study in mixed groups for adaptation in society. For students with special educational needs, it is planned to provide educational and methodological aids in printed and electronic forms in agreement with the lecturer conducting the classes.

For students in groups with special educational needs are given the opportunity of distance learning, in case of deterioration of their health status, which has the conclusion of a medical advisory commission.

Methods for achieving learning outcomes	Learning outcomes									
	LO 1	LO 2	LO 3	LO 4	LO 5	LO 6	LO 7	LO 8	LO 9	LO 10

internal quality assurance system educational activities aimed at improving the quality of educational services is determined by:

- policy in the field of quality assurance;
- development and approval of ongoing educational programs;
- studentorientirovannym learning, teaching and assessment;
- admission of students, academic performance, recognition and certification;
- teaching staff;
- training resources and support training systems;
- information management;
- informing the public;
- continuous monitoring and periodic program evaluation;
- periodic external quality assurance.

Professional practice

Professional practice is a required component of study the student.

In accordance with the specific OP organizes the following practices:

- training;
- language;
- teaching;
- Production; Elements
- the model of a graduate
- pre-diploma.

The purpose of the training practice - the acquisition of primary professional competencies, including the consolidation and deepening of theoretical knowledge acquired during the training, laying the foundations of research, paperwork and working with business correspondence, acquisition of practical skills and work skills.

Teaching practice is organized for all students, is conducted in accordance with the characteristics and direction of the OP, is considered at a meeting of the department and is reflected in the program of practice.

The purpose of language practice is the formation of students' skills of interpretation and translation, business communication skills and networking, including native speakers.

Language practice is conducted for students engaged in training with knowledge of languages, in English and of multilingual groups.

The purpose of teaching practice - consolidation and deepening of knowledge of general scientific, cultural, psychological and pedagogical, methodical and special disciplines, as well as the formation on the basis of theoretical knowledge of pedagogical skills and competences.

Internship held in institutions, organizations and enterprises, relevant profile training of students.

Undergraduate practice carried out on senior year for students who perform graduate work. Manual pre-diploma practical exercises supervisor of the thesis

8 CONTENT OF THE EDUCATIONAL PROGRAM

8.1 Correspondence of the results of training in the educational program of the graduate model

The learning outcomes of the educational program are determined in accordance with the graduate model

Correlation matrix of learning outcomes for EP as a whole generated competencies

8.3 Information about the disciplines

№	Name of the discipline	Brief description of the discipline (30-50 words)	Expected learning outcomes (codes)								
			LO1	LO9	LO8	LO7	LO6	LO5	LO4	LO3	LO2
THE CYCLE OF GENERAL STUDIES optionally component											
1	Scientific research methods	The purpose of mastering the discipline is to develop in students the skills of a structural presentation of their own ideas, mastering the ways of working with various scientific and scientific information sources, taking into account the specifics of academic discourse. The discipline forms students' writing and critical thinking skills and linguistic and pragmatic competencies, improves the culture of written speech through the language they follow, gives an idea of the culture and principles of academic honesty.	5								
2	Fundamentals of law and anti-corruption culture	The basic concepts and connections between them are considered, concerning the legal system and legislation of the Republic of Kazakhstan, state-legal and constitutional development, the foundations of an anti-corruption culture, the principles of academic honesty.	5								
3	Ecology and life safety	The discipline provides knowledge about observing, evaluating and predicting changes in environmental conditions. Examines the causes of changes in natural sustainability, the unity and structure of the natural system and environmental protection measures. He gets acquainted with the work of the civil defense organization, the features of the lesion and poisonous substances. It is characterized by the substantiation of the place and role of the discipline in real life, the integration of interdisciplinary knowledge.	5								
4	Economy and business	The basic concepts related to the sectors of the economy and business, and the relationship between them are considered. The methods and techniques of analysis and application of legislative and conceptual documents in the process of mastering entrepreneurial, leadership and	5								

		innovation skills are described.						
5	Financial literacy	Financial literacy is a course that teaches risk management and achieving financial security through income and family budgeting, borrowing, investing, insurance, retirement, and tax planning.	5				+ +	
THE CYCLE OF BASIC DISCIPLINES								
The university component								
6	Physiological development of students	On the basis of the regularities of the physiological development of students, issues related to the anatomical and physiological characteristics of children and adolescents, the formation of personality, the preservation and promotion of health are considered. It describes the methods and techniques for developing skills to identify and develop students' abilities, to consolidate relations between a teacher and a student, and to organize work on protecting children's health, physical education, and labor training.	3				+ +	
7	Age-related psychology	In the course of studying the discipline, the features of the mental development of children of different school ages are identified and considered in accordance with their age characteristics using various methods of psychology. In addition, the ways of forming mental qualities in preschoolers of primary school age, adolescents and adolescents are determined.	4				+ +	
8	Methodology of pedagogy and educational work	The knowledge and concepts of the educational process, forms, methods, means of educational work based on the meta-subject ideas of pedagogical science are considered.	5				+ + +	
9	Special pedagogical technologies in inclusive education	In the implementation of inclusive educational programs, SVE is aimed at developing knowledge about activities, methods and forms, principles and factors of raising children, psychological and pedagogical problems of training and development. Designing personal professional growth and educational trajectory; EP development technologies; development of skills for studying the features of the practical activity of a teacher in an inclusive educational space.	5				+ + +	
10	Modern assessment technologies	New approaches to teaching and learning, methods of differential assessment, the basics of diagnostics, the use of information and	5				+ +	

		communication technologies in education and training in accordance with age characteristics, consider the basics of school education and management and self-esteem from the point of view of critical thinking.	
THE CYCLE OF Professional discipline			
		The university component	
11	Methods of teaching mathematics	The subject of the methodology of teaching mathematics, the goals and objectives of teaching mathematics at school, provisions, methods, forms and content, the formation of concepts, proof of theorems, teaching calculations, organizing and conducting lessons and extracurricular activities, full-time teaching is taken into account, and the application of knowledge in practice.	5 + + + +
12	Methods of teaching physics	The system of training teachers of physics, the issues of ensuring a high level of teaching physics at the university, ways to increase students' enthusiasm and interest in understanding the world at each lesson based on the principles of minimax, consistency, variability, and creativity are considered. The ways of creating a lesson plan, integrating subject knowledge and assessing creativity in inclusive education are described.	5 + + + +
13	Innovative and computer technologies for teaching mathematics	The updated program-oriented content, approaches, methods and means of teaching mathematics, innovative teaching and assessment technologies, and approaches to creative evaluation of the effectiveness of their application are considered. Criteria-based assessment of educational achievements, diagnostics, creation of SMR and training cases, establishing feedback through ICT, integration of subject knowledge in the implementation of projects.	4 + + + +
14	Innovative and computer technologies for teaching physics	The updated program-oriented content, approaches, methods and means of teaching physics, innovative teaching and assessment technologies, and approaches to creative evaluation of the effectiveness of their application are considered. Criteria-based assessment of educational achievements, diagnostics, creation of SMR and training cases, establishing feedback through ICT, integration of subject knowledge in the implementation of projects.	4 + + + +
15	Elementary	Numbers, expressions, functions, equations and inequalities in school	3 + + + +

		theorems and conclusions, methods of proofs and calculations, and practical applications are considered. The role of the subject in solving classical and non-classical problems of differential equations and mathematical physics, analysis of problem solving methods, methods of integrating subject knowledge are described.					
20	Differential Equations	The logical formulation of classical problems of solving simple linear differential equations and systems of equations, known methods for their solution and their practical applications are considered. Numerical methods, optimal control, their role in solving complex problems in the field of calculus of variations, analysis of problems based on the use of simulation, methods of integrating subject knowledge are described.	6	+	+	+	
21	Mathematical logic and discrete mathematics	Logical algebra, discrete functions, graphs, basic concepts related to the synthesis of control systems, theorems and assertions, proofs and calculation methods are considered. Various transmissions of the mathematical language, methods of proving the inconsistency, independence and completeness of the theory, analysis of the solution of the problem, the place and role of the subject in real life, methods of integrating subject knowledge are described.	4	+	+	+	
22	Theory of Probability and Mathematical Statistics	The algebra of events of probability theory, random variables, laws of large numbers, laws of types of forecasting, basic and basic theories of mathematical statistics are considered. The ways of finding a set of solutions to the problem and the practical application of combinatorial analysis, modeling in cognitive and scientific research, analysis of problem solving, the place and role of the subject in real life, methods of integrating subject knowledge are described.	4	+	+	+	
23	The practice of solving mathematical problems	Compilation of simple and complex problems, modeling in the form of drawings, pictures, brief notes, analysis of the basic scheme for solving problems, solving problems in different ways, arithmetic and algebraic methods are considered. It is focused on the application of mathematical knowledge in practice, the integration of subjects, the development of critical thinking, positive thinking, the organization of the educational process using ICT.	6	+	+		

24	Mechanics	Kinematics, dynamics, basic laws of statics, Galileo's principle of relativity, AST, solid mechanics, the law of universal gravitation, hydrodynamics, oscillatory motion, waves, methods for solving problems using the basic laws of mechanics, practical applications, laboratory research methods. The analysis of the relativistic error sent in laboratory work, tracking the role of the subject in science, methods of integrating subject knowledge are described.		5	+	+	+
25	Molecular physics	The structure of bodies in the state of aggregation, their changes as a result of external influences, Maxwell and Boltzmann distributions, the molecular-kinetic theory of gases, isoprocesses, the laws of thermodynamics, phase equilibrium, transient processes, the crisis state of substances, surface phenomena are considered when the boundaries of separation of various phases are considered. Methods of calculation, laboratory work, collection of results, practical application, tracking the role of the subject in science, integration of subject knowledge are described.		6	+	+	+
26	Electricity and magnetism	Laws of electrostatics, electric field, Coulomb's law, superposition principle, laws of direct and alternating current, Ohm's law, Kirchhoff's laws, physical foundations of Ampère, Joule, Lenz's law, electric current in gas, electrolyte, magnetic properties considered matter, magnetic field, solution methods tasks, methods for measuring the main parameters in laboratory work, their place in real life, methods for collecting scientific data, integrating knowledge.		6	+	+	+
27	Optics	The nature of light, its interaction with matter, the main phenomena observed during its propagation, the laws of light refraction, the laws of reflection, the properties of lenses, the application of knowledge obtained from geometric and wave optics in society, technology, life, and medicine are considered., methods for solving problems, methods for measuring the main parameters in laboratory work, determine the place of the subject in real life and describe ways to integrate subject knowledge.		5	+	+	+
28	Physics of the atom and atomic nucleus	The structure of the atom, its planetary model, Bohr's theory and its problems, models of the atomic nucleus, radioactivity and its properties, elementary particle physics, methods for solving problems		5	+	+	+

		in the discipline, methods for measuring the main parameters in laboratory work are considered. The ways of analyzing the phenomena of the physics of the atomic nucleus and elementary particles, substantiating the place of the subject in the system of sciences, and integrating subject knowledge are described.					
29	The practice of solving physical problems	The concepts considered in the school textbook of physics, and methods for solving problems, methods for calculating and evaluating criteria and their use as didactic materials in practice are considered. The ways of using CBR in problem solving, communication in project work, presentation of information culture and integration of subject knowledge are described.	6	+	+		
THE CYCLE OF PROFESSIONAL DISCIPLINE							
		optionally component					
30	Math word problems and their applications	Identifying and understanding the role of word problems in the development of students' logical thinking; reading, analysis, interpretation of digital information presented in various forms; free use of mathematical knowledge in solving various problems encountered in life situations; make reasoned mathematical judgments; search for effective ways to solve word problems, their implementation, self-control, connection with life; ways of mastering the methods of developing students' functional literacy and discovering interdisciplinary connections are considered.	6	+	+	+	
31	Geometric structures on the plane and in space.	Ensure mastery of the theoretical foundations and methods of solving problems of geometric construction on a plane and in space. Opening the way to understanding the didactic possibilities and methodological features of teaching constructive geometry at school.	6	+	+	+	
32	Compilation of Olympic problems in mathematics	The practical application of theoretical information and methods for solving complex and non-standard problems in school mathematics is considered. The technology of professional training for the development of logical thinking, creative abilities of students, as well as the methodology for developing elective courses to prepare talented students for writing Olympic problems, communication in team work, information culture and integration of interdisciplinary knowledge are	6	+	+	+	

33	Theoretical Physics 1	Classical mechanics describes the motion of planets, stars, galaxies, etc. in space. describes the movement of astronomical objects, as well as projectiles and machine parts. The subject of electrodynamics describes the relationship between electrical and magnetic phenomena, electromagnetic radiation, electric current and its interaction with an electromagnetic field.	6	+	+	+
34	Theoretical Physics 2	Quantum mechanics - defines the laws of motion of microparticles (elementary particles, atoms, molecules, atomic nuclei) and quantum systems (for example, crystals) and describes the relationship of physical quantities characterizing particles and quantum systems with quantities directly measured in macroscopic experience. Statistical and thermodynamic - physical processes in macroscopic systems are taught to use two complementary methods - statistical (molecular-kinetic) and thermodynamic methods in solving real problems, the physical meaning of processes in macroscopic systems is described.	6	+	+	+
35	Astronomy	General ideas about the structure, movement and development of celestial bodies are considered. Following the place of the evolving model of the universe in the development of science, considering the movement, structure and appearance of celestial bodies, their systems, the celestial model, digital knowledge resources are used in processing the results of the experiment, joint work with the group, ways of subject integration are described.	6	+	+	+
